

The Sun of Isozu

We will start “Isozu report” here.

Isozu has a beautiful sunrise but is the first place that hold the court of Yokkaichi pollution.

We will start the Isozu Environmental School. It's for knowing more, learning more about our environment. A place where you can make friends with the same aims. To help and enjoy nature of Isozu.

As we getting many friends, we send Isozu report to Yokkaichi, to Japan, to all of the world. Then we think globally act locally.

We know that Yokkaichi pollution robbed hundreds of people's health and lives. However, it's not past. Now, 480 people are sick because of the pollution.

The nature too. We'd like to think about it. To recovering the nature, we want to connect people.

There is environmental destruction now. What is the duty for administration and politicians? We need rules for symbiosis with the environment and the civil society. They are the thing we want to leave to children.

Let's encourage the young people, to take the active part of this program because they are the runner of the future. They are the hope. The loving nature heart is the legacy for our children.

Today is a new sunrise of Isozu.

It's our sustainable hope.
